

For each movie request:

- 1) Client selects request
- 2) Client establishes request with first server
- 3) Server welcomes client
- 4) Client request sent to server
- 5) Server handles request and responds
- 6) Socket closes
- 7) Repeat for each server on server list

Note: Although the client will send the same request to each server, as each server maintains a different database (potentially), each response will differ
